REPORTING ERRORS AND RECOMMENDING IMPROVEMENTS

You can help improve this manual. If you find any mistakes, or if you know of a way to improve the procedures, please let us know. Mail your letter, DA Form 2028 (Recommended Changes to Publications and Blank Forms) or DA Form 2028-2 located in back of this manual direct to: Commander, US Army Communications- Electronics Command and Fort Monmouth, ATTN: AMSEL-LC-LM-LT, Fort Monmouth, New Jersey 07703-5007.

In either case a reply will be furnished direct to you.

ORGANIZATIONAL AND DIRECT SUPPORT MAINTENANCE**REPAIR PARTS AND SPECIAL TOOLS LIST****(INCLUDING DEPOT MAINTENANCE REPAIR PARTS AND SPECIAL TOOLS)****SECTION I. INTRODUCTION****1-1 Scope.**

This Repair Parts and Special Tools List (RPSTL) lists and authorizes spares and repair parts; special tools; special test, measurement, and diagnostic equipment (TMDE); and other special support equipment required for performance of direct support maintenance of the Commanders' Tactical Terminal (CTT) Radio Relay Test Set. It authorizes the requisitioning, issue, and disposition of spares, repair parts and special tools as indicated by the source, maintenance and recoverability (SMR) codes.

1-2 General Information.

In addition to Section I, Introduction, this RPSTL is divided into the following sections:

- a. Section II Repair Parts List
- b. Section III Special Tools List
- c. Section IV Cross-reference Index

1-2.1 Section II Repair Parts List. This section provides a list of spares and repair parts authorized by this RPSTL for use in the performance of maintenance. This list also includes parts which must be removed for replacement of the authorized parts. The parts list is composed of functional groups in ascending alphanumeric sequence, with parts in each group listed in ascending figure and item number sequence. Bulk materials are listed in item name sequence. Repair parts kits are listed separately in their own functional group within Section II. Repair parts for repairable special tools are also listed in this section. Items listed are shown on associated illustration(s)/ figure(s).

1-2.2 Section III Special Tools List. This section provides a list of special tools, special TMDE, and other special support equipment authorized by this RPSTL for the performance of maintenance and reflects Basis of Issue (BOI) information in the DESCRIPTION AND USABLE ON CODE column.

1-2.3 Section IV Cross-reference Index. This section provides identification of all parts in two separate lists. The first list includes all National stock numbered (NSN) items in National item identification number (NIIN) sequence and is followed by a second list of all part numbers in alphanumeric sequence.

National stock numbers and part numbers are cross-referenced to each illustration figure and item number appearance. The figure and item number index lists figure and item numbers in alphanumeric sequence and cross-references NSNI CAGE and part numbers.

1-3 Explanation of Columns (Sections II and III). Section II and III column descriptions are defined in the following paragraphs.

1-3.1 ITEM NO. (Column 1). This column will indicate the number used to identify items called out in the illustration.

1-3.2 SMR CODE (Column 2). This column will provide the SMR code. The SMR code is a 5-position code containing supply/requisitioning information, maintenance category authorization criteria, and disposition instruction. The first two positions of the SMR code indicate the source and provide information on how to obtain the item. Source codes used in this RPSTL are defined in table 1-1. The third and fourth positions are the maintenance code. The third defines who is authorized to install, replace or use the item and the fourth defines who is authorized to do a complete repair of the item. The fifth position indicates the recoverability code and defines who will determine the disposition action on an unserviceable item.

Table 1-1. Source Codes.

Code	Explanation
PA PB PC PD PE PF PG	These codes indicate items are stocked and requested/requisitioned using the NSN. Authorization of these items is dependent upon the maintenance category indicated by the third position of the SMR code.
KD KF KB	Items with these codes are not requested/requisitioned individually. They are part of a kit which is authorized to the maintenance category in the third position of the SMR code. The complete kit must be requisitioned and applied.
MO MF (made at DS/AVUM level) MD (made at Depot level) MH (made at GS level)	Items with these codes can not be requested/requisitioned individually, they must be made from bulk material identified by the part number in the DESCRIPTION AND USABLE ON CODE (UOC) column and listed in the bulk material group of the repair parts list in this RPSTL. If the SMR code third position authorizes you to replace the item, but the source code indicates that it is made at a higher level, the item must be ordered from the higher maintenance level.

Table 1-1. Source Codes - Continued.

Code	Explanation
ML (made at SRA) AO AF AH AL AD	Items with these codes are not to be requested/requisitioned individually. Parts that make up the assembled item must be obtained and assembled at the maintenance level indicated by the source code. If the third position code of the SMR code authorizes you to replace the item, but the source code indicates the items are assembled at a higher level, order the item from the higher maintenance level.
XA XB XC XD	Do not requisition XA items. Order the next higher assembly. If an XB item is not available from salvage it must be ordered using the CAGE and part number given. Installation drawing, diagram, instruction sheet, field service drawing, identified by manufacturers part number. Item is not stocked. XD coded items must be ordered through normal supply channels using the CAGE and part number given, if no NSN is available.

1-3.2.1 Maintenance Code. The maintenance code provides the level of maintenance authorized to use and repair support items. Maintenance codes are entered in the third and fourth positions of the SMR code. The third position provides the lowest maintenance level authorized to remove, replace, and use an item. Third level maintenance codes are defined in table 1-2. The maintenance code located in the fourth position determines if an item is to be repaired and identifies the lowest maintenance level with the capability to do complete repair.

Limited repair may be done on an item at a lower level of maintenance if authorized by the Maintenance Allocation Chart (MAC) and SMR codes. Fourth position maintenance codes are defined in table 1-3.

Table 1-2. Third Position Maintenance Codes.

Code	Application/Explanation
C	Operator maintenance done within organizational maintenance.
O	Unit or aviation unit category can remove, replace, and use the item.
F	Direct support or aviation intermediate level can remove, replace, and use the item.
H	General support level can remove, replace and use the item.
L	Specialized repair activity can remove, replace and use the item.
D	Depot level can remove, replace, and use the item.

Table 1-3. Fourth Position Maintenance Codes.

Code	Application/Explanation
O	Unit is the lowest level that can do complete repair of the item.
F	Direct support or aviation intermediate is the lowest level that can do complete repair of the item.
H	General support is the lowest level that can do complete repair of the item.
L	Specialized repair activity (SRA) is the lowest level that can do complete repair of the item.
D	Depot is the lowest level that can do complete repair of the item.
Z	Nonreparable. No repair is authorized.
B	No repair is authorized. (No parts or special tools are authorized for the maintenance of "B" coded items.) However, the item may be reconditioned by adjusting, lubricating, etc. at the user level.

1-3.2.2 Recoverability Code. Recoverability codes are located in the fifth position of the SMR code and indicate the disposition action on unserviceable items. Recoverability codes are defined in table 1-4.

Table 1-4. Recoverability Codes.

Code	Application/Explanation
Z	Nonreparable item. When unserviceable, item must be condemned and disposed at maintenance level indicated by third position of SMR code.
O	Reparable item. When uneconomically repairable, condemn and dispose of the item at organizational level.
F	Reparable item. When uneconomically repairable, condemn and dispose of the item at the direct support or aviation intermediate level.
H	Reparable item. When uneconomically repairable, condemn and dispose of the item at the general support level.
D	Reparable item. When beyond lower level repair capability return to depot. Item can not be condemned or disposed below the depot level.
L	Reparable item. Condemnation and disposal not authorized below SRA.
A	Item requires special handling or condemnation procedures because of specific reasons (e.g. precious metal content, high dollar value, critical material, or hazardous material.) Refer to appropriate manuals/directives for specific instructions.

1-3.3 Commercial and Government Entity Code (CAGE) (Column 3). The CAGE is a five digit numeric code which is used to identify the manufacturer, distributor, or Government agency, etc., that supplies the item.

1-3.4 PART NUMBER (Column 4). The part number is the primary number used by the manufacturer to control the design and characteristics of an item by means of its engineering drawings, specifications standards, and inspection requirements to identify one item or a range of items. (When using a NSN to requisition an item, the item received may have a different part number than the part number ordered).

1-3.5 DESCRIPTION AND USABLE ON CODE (UOC) (Column 5). The UOC will include the Federal item name and a minimum description to identify the item. UOC also will include the physical security classification of the item by an entry in parenthesis. Additional items included in kits and sets will be listed below the name of the kit or set. Spare/repair parts that make up an assembled item will be listed following the name of the assembled item. Part numbers for bulk materials are referenced in this column in the line item entry for the item to be manufactured/ fabricated. If the item is not used with all serial numbers of the same model, the effective serial numbers are shown on the last line of the description (before UOC). Also contained will be UOC special information, Basis of Issue (BOI) information for the Special Tools List section, and the statement "END OF FIGURE" will appear below the last item description for a given figure in both Sections II and III.

1-3.6 QTY (Column (6)). The QTY column-provides the quantity of the item used in the breakout shown on the illustration/figure, which is prepared for a functional group, subfunctional group, or an assembly. A "V" in this column will indicate that the quantity is variable and may vary from application to application.

1-4 Explanation of Columns (Section IV).

1-4.1. National Stock Number (NSN) Index.

1-4.1.1 STOCK NUMBER Column. This column lists the NSN by National item identification number (NIIN) sequence. The NIIN consists of the last nine digits of the NSN. When using this column to locate an item, disregard the first four digits. When ordering items by stock number the complete NSN should be used.

1-4.1.2 FIG. Column. This column provides a reference to the figure that identifies and locates the item. Figures are provided in numerical order in Sections II and III.

1-4.1.3 ITEM Column. This column lists the item number associated with the figure listed in the FIG. column. This item is also identified by the NSN listed on the same line.

1-4.2 PART NUMBER INDEX. This index lists part numbers in ascending alphanumeric sequence.

1-4.2.1 CAGE Column. The CAGE is the five digit numeric code used to identify the manufacturer, distributor, or government agency, that supplies the item.

1-4.2.2 PART NUMBER Column. This column indicates the primary number used by the manufacturer to control the design and characteristics of the item by means of its engineering drawings, specifications standards, and inspection requirements to identify an item or range of items.

1-4.2.3 STOCK NUMBER Column. This column provides a list of the NSN for the associated part number and manufacturer identified in the PART NUMBER and FSCM columns to the left.

1-4.2.4 FIG. Column. This column provides a reference to the figure that identifies and locates the item listed in Sections II and III.

1-4.2.5 ITEM Column. This column indicates the number assigned to the item as it appears in the figure referenced in the adjacent figure number column.

1-4.3 FIGURE AND ITEM NUMBER INDEX.

1-4.3.1 FIG. Column. This column provides a reference to the figure that identifies and locates the item listed in Sections II and III.

1-4.3.2 ITEM Column. The item number is that number assigned to the item as it appears in the figure referenced in the adjacent figure number column.

1-4.3.3 STOCK NUMBER Column. This column lists the NSN for the item.

1-4.3.4 CAGE Column. The CAGE is a five digit numeric code used to identify the manufacturer, distributor, or Government agency, that supplies the item.

1-4.3.5 PART NUMBER Column. This column indicates the primary number used by the manufacturer which provides control of the design and characteristics of the item by means of its engineering drawings, specifications standards, and inspection requirements to identify an item or range of items.

1-5 Special Information.

1-5.1 USABLE ON CODE (UOC). The UOC appears in the lower left corner of the Description column heading. UOCs are shown as "UOC" in the Description Column on the first line applicable item description /nomenclature. Uncoded items are applicable to all models. The UOC used in this RPSTL is GFF.

1-5.2 FABRICATION INSTRUCTIONS. Bulk materials required to manufacture items are listed in the Bulk Functional Group of this RPSTL. Part numbers for bulk materials are also referenced in the description column of the line item entry for the item to be manufactured/fabricated.

1-5.3 ASSEMBLY INSTRUCTIONS. Items that make up the assembly are listed immediately following the assembly item entry or reference is made to an applicable figure.

1-5.4 KITS. Line item entries for repair parts kits appear in a group in Section II (see Table of Contents).

1-5.5 INDEX NUMBERS. Items which have the BULK in the figure column will have an index number shown in the item number column. This index number is a cross-reference between the National Stock Number/Part Number Index and the bulk material list in Section II.

1-5.6 Associated Publications. Table 1-5 will provide a list of publications that pertain to the Radio Relay Test Set and its associated components.

Table 1-5. Associated Publications.

Publication	Short Title
TBD	

1-6 HOW TO LOCATE REPAIR PARTS.

1-6.1 When the National Stock Number (NSN) or Part Number is NOT Known.

- a. Using the table of contents determine the assembly group or subassembly group to which the item belongs. This is necessary since figures are prepared for assembly groups and subassembly groups, and listings are divided into the same groups.
- b. Find the figure covering the assembly group or subassembly group to which the item belongs.
- c. Identify the item on the figure and use the Figure and Item Number Index to the NSN.

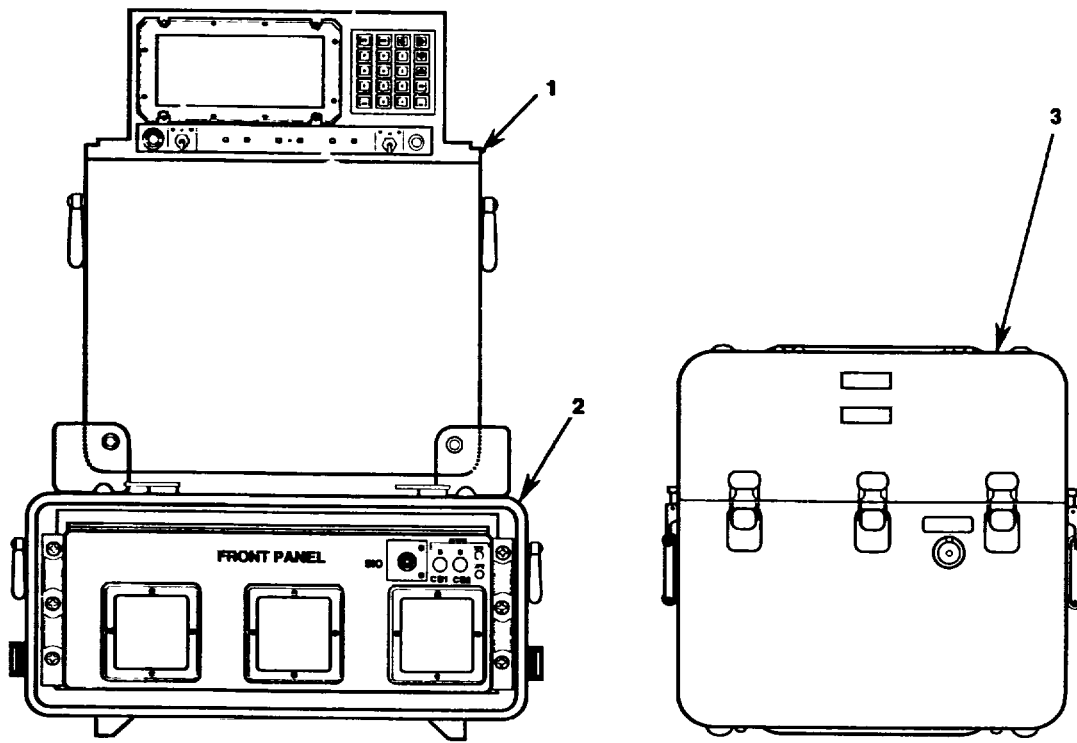

1-6.2 When the NSN or Part Number is Known.

- a. Using the National Stock Number or the Part Number Index, find the pertinent National Stock Number or Part Number. The NSN index is in National Item Identification Number (NIIN) sequence. The part numbers in the Part Number index are listed in ascending alphanumeric sequence. Both indexes cross-reference the user to the illustration/figure and item number of the item.
- b. Reference the figure and item number, verify that the item is correct, then locate the item number in the repair parts list for the figure.

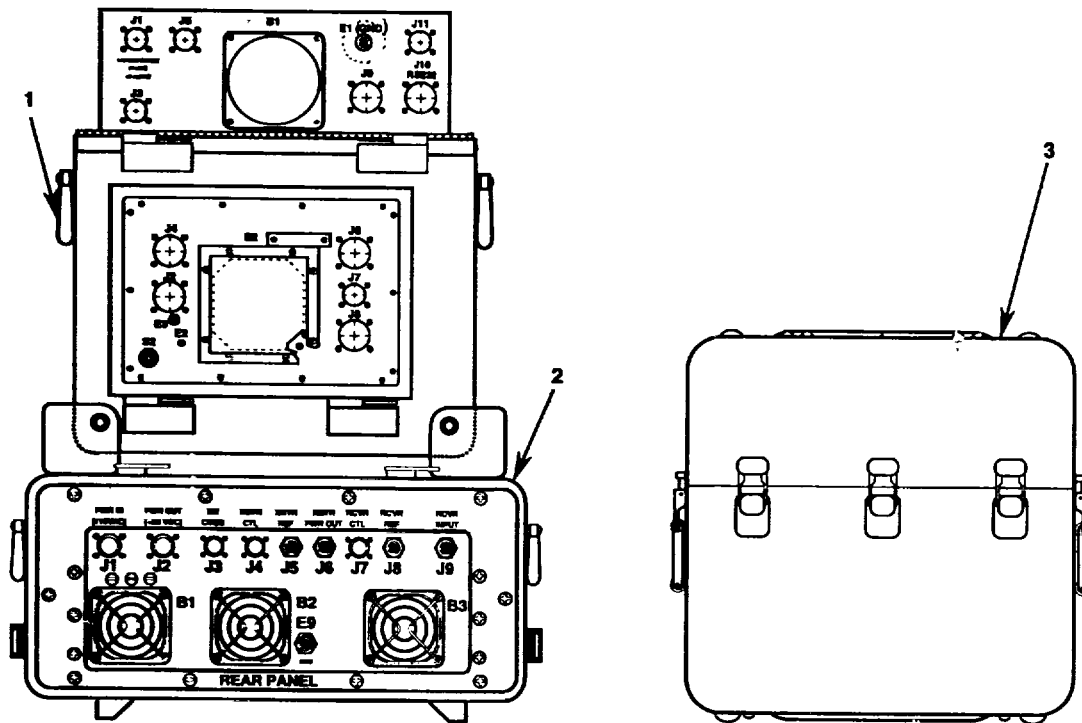

1-7 **ABBREVIATIONS.** Abbreviations that are unique to this RPSTL and are not identified in MIL-STD-12, will be located in table 1-6.

Table 1-6. Abbreviations.
